

# What's New?

VERSION:

## 2025 July Release

**NOTE:** See the topic [MSWhse Online Help Tips](#) within the [MSWarehouse Online Help](#) for information on using this Online Help. There is a video illustrating the best practices for its use there, as well!

In addition to numerous behind-the-scenes updates, the following new features, enhancements, and fix are in this release.

### Feature: Attributes

**“Attribute” fields are now available!**

#### **NEW VIDEO!** [Attributes](#)

Please watch the new video, [Attributes](#), located within the [MSWarehouse Online Help](#) topic [Attributes](#). This video details what Attribute fields are, how to create them, and how they are used within Inbound and Outbound transactions. Click either of the blue links to view the video.

The new “Attribute” fields allow the user to set additional descriptives about an Item Number, such as any details that a storage customer wants tracked or any details your company wishes to have like Color, Case Count, Dye Lot, and Condition to mention a few. These customizable fields are assigned to Item Numbers. Attribute fields, which are required fields as indicated by the red asterisk, do require an entry into that field when inbound and outbound items.

Attributes remain associated to the Item Number within numerous areas within MSWarehouse, such as [Customer Setup](#), [Item Numbers Tab](#), [Kitting Tab](#), [Inbound](#) Transactions, [Outbound](#) Transactions, [Move Quantity](#), [Adjustments](#), within several [Reports](#), Pick Tickets, Delivery Tickets, and the Warehouse Receiving Reports. Details on how Attributes are used within many of these sections are found within the new topic [Attributes](#) located within the [MSWarehouse Online Help](#).

Figure 1: Attributes assigned to Item Number 12345 are shown within Inbound Transactions.

Attributes are assigned within [Customer Setup](#) > Item Import or within the [Item Numbers Tab](#). Attributes can only be assigned to new Item Numbers or existing Item Numbers that have not already been used in a transaction. See the video above for details.

When creating “Attributes,” the text entered within the field will be the name of that Attribute field for that Item. Notice the three Attributes assigned in Figure 2 are shown in Figure 1. There are six fields that are available for Attributes. When creating Attributes, Attribute 1 must be entered first, then Attributes 2 becomes active – available - for use. Once Attribute 2 is set, then Attribute 3 becomes available, and so on. Fields that are active are white, and fields that are not active are grey.

**NOTE:** Be aware of the order in which Attributes are assigned as this can affect outbounding. The video for Attributes, found within the [Attributes](#) topic, explains this in more detail.

## Feature: Inbound Transactions

### Warehouse Receiving Reports now contain Item Number images.

If an Item Number has an image attached to it's Item Number profile, when that Item Number is a part of an inbound transaction, the Item Number's image is now included within the Warehouse Receiving Report.

**Warehouse Receiving Report**  
**Transaction No: 1226**

**Creedmoor Moving Systems & Storage**  
15 Industrial Way Tucson Arizona 85701

Item	Description	Inventory Number	Unit of Measure	Weight by Item	Quantity Received	Status
A-123	6 Foot glass display, glass has a chip on the LH front corner, the front lip is worn and has a few light scratches		Each	269	10	
GR-02	Guest Room Carpet		Roll		5	
Sculpture	Metal sculpture B' <b>Serial Number:</b> CA121		Each	750	1	

**Crate Condition:** UNDAMAGED

Weight: 3440  
Total Item Quantity: 16

Inventory Item Image(s)

Sculpture

Figure 3: New Warehouse Receiving Reports have images!

The size of each of the images will be averaged so that three images will fit on each "line." Of note, if an image is very small, the image may render slightly blurry in the WRR.

**EXTRA!** The new feature **Attributes** is shown within the WRR for "Sculpture" and the Attribute is "Crate Condition."

## Enhancement: Email Links

Links within MSWarehouse generated emails now have much longer expiration times.

Before this update, links within emails expired within seven days. This was improved so that now the links will not expire until after 5 years.

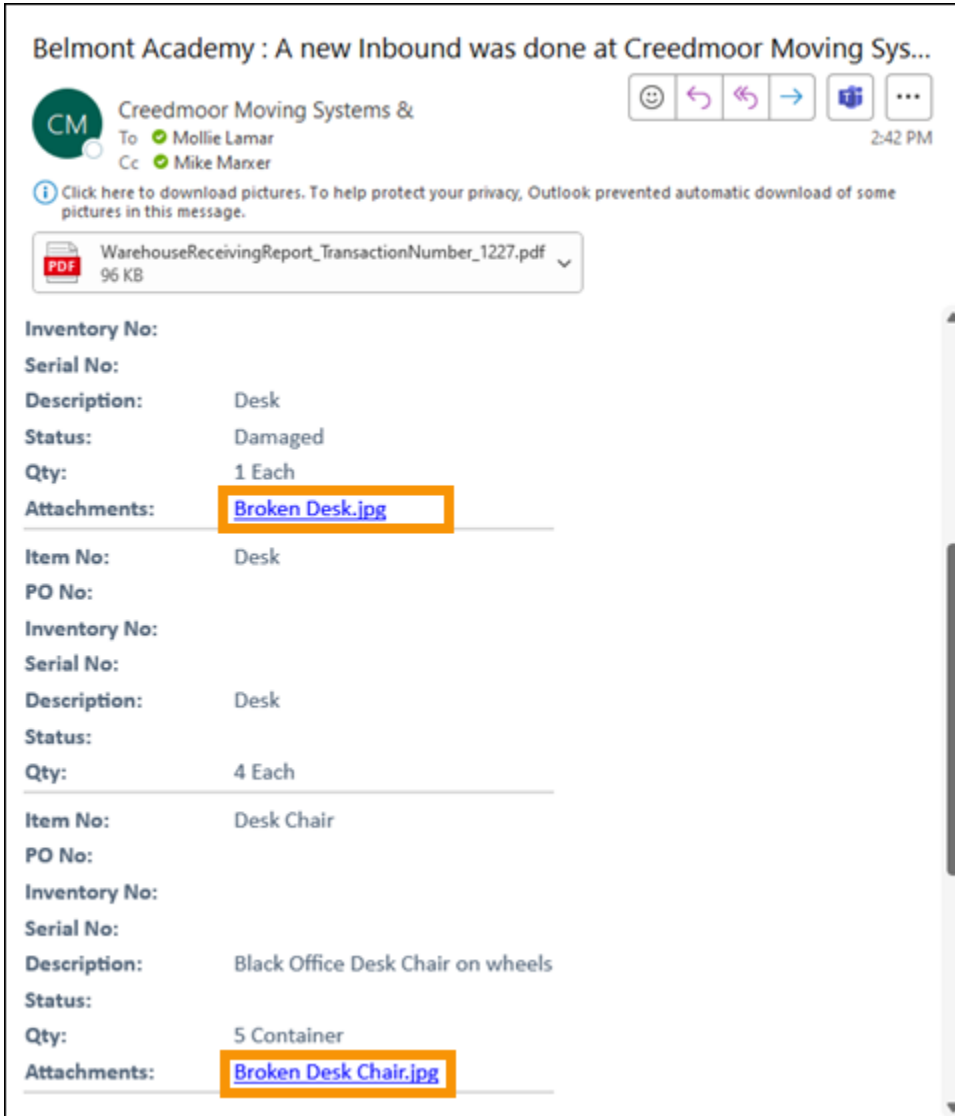

Figure 4: MSWarehouse generated email with image links.

INTERNAL REFERENCE: WD-4331

## Enhancement: Email

“Hi” was removed from Warehouse emails.

MSWarehouse generated emails will no longer start with the greeting: Hi. Emails will now start with “Thank you for using our services.”

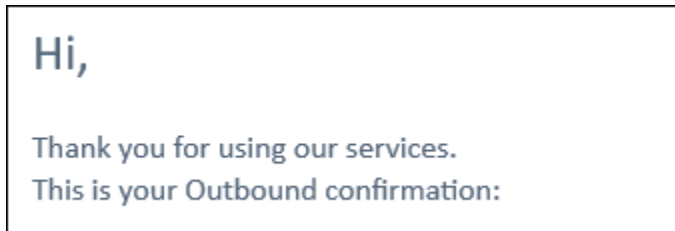

Figure 5: Example of “Hi” being included in MSWarehouse generated email before this update.

INTERNAL REFERENCE: WD-4362

## Fix: Warehouses

Locations were showing “In Use” and “Empty” at the same time.

Within Administration > Warehouses > **Locations** tab, “in use” and “empty” were erroneously showing at the same time. This, however, was only an issue when the tenant uses Anniversary Date Customers. This has been resolved.
