

What's New?

VERSION: 2026 June Release

Summary: Find more details on each update after this listing.

Enhancements:

- **WES:** Queries now list all results. Also, increased logic to better answer queries.
- **WRR:** Logo is automatically resized for the Warehouse Receiving Report.
- **Pick Tickets:** PO Number has been added to Pick Tickets.

Fixes:

- **WES:** WES now looks to the "Is Active" toggle within Customer Setup for queries regarding "active" customers.
- **Report:** When searching within the Inventory Report by Location report, the location drop-down does not populate all 'in use' locations. (WD-4474)
- **General Functionality:** Editing an Inbound transaction was taking too long to save. (WD-4456)
- **Pick Tickets:** Too large a transaction caused Pick Ticket to fail
- **Dashboard:** Auto-fresh was occurring too frequently causing issues.

WES: Queries now list all results

With this update, all the query results within WES will list, such as in the image below where there are 352 results. Previously, query results would just "Show 100 results".

There are 352 locations in the warehouse system, featuring various addresses like AA001 and AA011 with allowed positions mostly around 2 to 7. Some locations show missing square footage or cubic footage values, which might need attention to ensure all location details are complete. Overall, the locations provide a diverse range of storage capacities and configurations.

Also included in this release is better logic to answer complex queries.

WRR: Logo is automatically resized for the Warehouse Receiving Report.

Within Administration > Configurations, the Navigation Logo is the logo used to populate the Warehouse Receiving Report (WRR).

Tip: Be mindful of the logo used, as a rectangular logo will render more space efficiently than a square logo, as illustrated in the images below.

The image shows a Warehouse Receiving Report (WRR) for transaction 1131. The header includes the title 'Warehouse Receiving Report', the WRR number 'WRR: 1251235', and the transaction number 'Transaction No: 1131'. On the left, there is a rectangular logo for 'CREEDMOOR MOVING SYSTEMS & STORAGE'. To the right of the logo, the company name 'Creedmoor Moving System - Boulder' is listed, followed by the address '115 N. 5th Street, Suite 401 Grand Junction Colorado 81501' and the phone number 'Phone: 9702616831'. At the bottom, the customer information 'Customer: BIG JAKE'S BBQ - JAKE FARLEN' and shipping information 'Shipping: Carrier: UPS' are displayed.

Figure 1: Rectangle logo on WRR

The image shows a Warehouse Receiving Report (WRR) for transaction 1131, similar to Figure 1. However, the logo for 'CREEDMOOR MOVING SYSTEMS & STORAGE' is square. The rest of the report, including the header, company information, and customer/shipping details, is identical to Figure 1.

Pick Tickets: PO Number has been added to Pick Tickets

The PO Number is now included on Pick Ticket by Item and Pick Ticket by Location.

Add Item Number/Inventory PO Number to Pick Tickets for accurate pulling within the warehouse. (WD-4422)
Customer Facing Web Users: Added a new checkbox called “Inactive” on the Add/Edit Contact screen for CFW Users.

Dashboard: New Refresh button allows manual updating of Dashboard

To keep data current, the Dashboard was refreshing approximately every minute to update allocation usage. This fix increases the auto-refresh interval and adds an on-demand manual refresh option, reducing unnecessary database activity.

WES: Active customer inquiries look to the Status “Is Active” toggle for status

Before this fix, WES queries used the Billing Details active status to determine whether a customer was active or not. With this update, WES now uses the customer's "Is Active" setting in Customer Setup, ensuring active customer inquiries reference the correct status.

Reports: Inventory Report by Location report fix resolves drop down issue

When using the Location dropdown with the Inventory Report by Location report, the drop-down was not populating all 'in use' locations.

General Functionality: Editing an Inbound transaction was taking too long to save

Inbound transaction edits now save faster, resolving an issue where saves could take 20–30 seconds even when only one item was included.

Pick Tickets: Too large a transaction caused Pick Ticket to fail

Transactions with a large number of items were causing Pick Ticket generations to fail. To help prevent this issue while a permanent fix is underway, a temporary safeguard now limits transactions to approximately 50 line items so Pick Tickets can print successfully.
